

Stage [NUMBER] — [STAGE NAME]

Objective

[Verb] the [system/repository/process/model/workflow] in order to
[desired engineering/business outcome].

Use evidence from:

- [prior stage/artifacts]
- [repository/system sources]
- [business/technical evidence]

Scope

Analyse / execute across:

- [scope item 1]
- [scope item 2]
- [scope item 3]
- [scope item 4]
- [scope item 5]

Include:

- [architecture / process / data / security / testing / etc.]

Exclude:

- [explicit exclusions]

Required Analysis

Evaluate:

1. [analysis dimension]
2. [analysis dimension]
3. [analysis dimension]
4. [analysis dimension]
5. [analysis dimension]

For every material finding:

- state the finding;
- provide evidence;
- identify impact;
- identify risk;
- identify confidence;
- identify unresolved questions.

Evidence Rules

Classify information as:

- **Verified Fact**
- **Inference**
- **Assumption**
- **Unknown**

Where repository/system evidence exists, reference:

- file paths;
- configuration;
- APIs;
- schemas;
- tests;
- logs;
- database objects;
- architecture artifacts;
- approved stakeholder evidence.

Do not present assumptions as facts.

Constraints / Guardrails

Do not:

- [prohibited action]
- [prohibited action]
- [prohibited action]

Only:

- [permitted action]
- [permitted action]

Preserve:

- [critical behaviour / baseline / control]

If evidence is insufficient, record it as **Unknown** rather than inventing an answer.

Required Artifacts

Create the directory:

`docs/[stage-folder]/`

Create and save:

- `[artifact-1].md`
- `[artifact-2].md`
- `[artifact-3].md`
- `[artifact-4].md`
- `[artifact-5].md`

Each artifact must include:

- stage;
- date/version;
- author/agent;
- status;
- evidence sources;
- assumptions;
- unresolved issues;
- residual risks.

Completion Gate

The stage is complete only when:

- [gate condition 1]
- [gate condition 2]
- [gate condition 3]
- all required artifacts exist;
- critical gaps are resolved or explicitly documented;
- evidence supports the stage conclusion.

Do not proceed to Stage [NEXT] if any blocking condition remains.

Required Final Response

Return:

1. Stage status: ****PASS / CONDITIONAL PASS / BLOCKED****
2. Key findings
3. Major risks
4. Assumptions / unknowns
5. Artifacts created
6. Blocking issues
7. Recommended next action
