

Prompt Anatomy

#	Prompt Anatomy	Purpose	Typical Language Used
1	Action / Mission	States exactly what the agent must do	"Establish...", "Analyse...", "Design...", "Validate...", "Implement...", "Assess..."
2	Scope / Objects to Examine	Defines what must be inspected or changed	repositories, services, APIs, data, workflows, security, tests, models, tools
3	Constraints / Guardrails	Prevents unsafe or premature action	"Do not modify...", "Do not invent...", "Only where Stage 8 justified...", "Preserve validated behaviour..."
4	Analysis Dimensions	Defines the lenses through which the work is performed	architecture, dependencies, security, cost, latency, quality, resilience, privacy
5	Evidence Rules	Forces grounding instead of speculation	"Distinguish Verified Fact, Inference, Assumption and Unknown", "cite repository evidence"
6	Artifact Generation	Explicitly creates durable outputs	"Create docs/.../ and save..."
7	Completion / Quality Gate	Defines when the stage is considered complete	"Stage completion requires...", "Do not proceed until...", "Critical gaps block progression"
8	Lifecycle Linkage	Connects this stage to prior or downstream stages	"Using Stage 0 evidence...", "Reconcile with Stage 0B...", "Stage 8 determines..."
